How to Build A Grate Cupboard in An Emergency

Commands drafted by Mayor Ronald S. Chump. January 2019

What You'll Need

Glue or chewing gum

Fiberbored

1 fish head

Staple gun, hinges

Lard and a bad Ruler

Tacks or cement or steel slats

Instructions

When an Emergency or a Crisis Hits hard, you should protect you're loved ones and you're valuables, so build this grate safe cupboard. Just follow the instructions:

⚠️ Bring out your bad Ruler to measure up how bad is the Emergency. If it is worse than the fish head then start to build NOW. Shutdown all you're other activities.

⚠️ Clear the area of any rapists or murderers before you start building the Cupboard because they really get in the way when you want to Build.

⚠️ Chop up the Fiberbored into simple shapes. (This stuff is usually made of a mishmash of old recycled off Cuts mashed up with glue by the manufacturer.)

How to Build A Grate Cupboard in An Emergecy (Page 2)

⚠ Use cement or Steel Slats to bind four pieces of the bored together and stick it with tacks on the media or a lot of gums. This is called the carcass of the cabinet. Let it dry out for a few weeks.

⚠ Chop up more fiberbored into simple shapes. This is the shelves. Glue them in. Don't put too many shelves or it will be too selfish and there isn't space for so many in this grate cupboard. This is for every individual one's good.

⚠ Now chop up two more bits for doors. Tack them on or use glue or anything gummy or tacky, or the staple gun. Make sure everything hinges smoothly with lard. Buy a strong lock for the front of you're cupboard and all you're valuables will be Safe in the Emergecy!

⚠ Then you will have fabricated you're Emergecy Cupboard.
